

Yireo EmailTester

Installation & User Guide

This document helps you to install the Magento extension EmailTester in your Magento 2 environment. If you need any help along the way, feel free to contact us via support@yireo.com. We are happy to help out to get you started quickly.

Installation

We are assuming here that the extension has already been purchased via the Magento Marketplace, which should have added the right permissions to install this extension via composer. First of all, the composer package should be installed via the following commands:

```
$ composer require yireo/magento2-emailtester2
```

Yireo EmailTester – Installation & User Guide

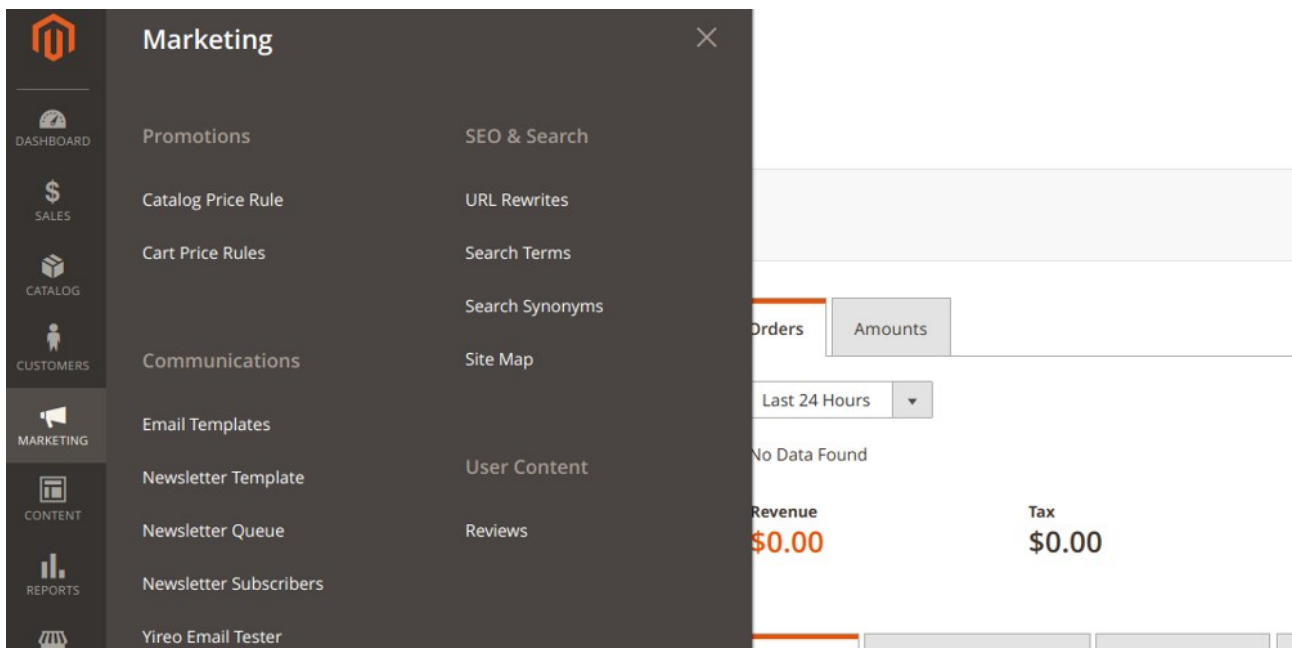

After this command has succeeded, a new folder `vendor/yireo/magento2-emailtester2` should be present with all module files. Now you can activate this module with the following commands:

```
$ ./bin/magento module:enable Yireo_EmailTester2  
$ ./bin/magento setup:upgrade
```

If your site is running in Production Mode, make sure to recompile the DI files and also re-run static content deployment.

Usage

Once the extension is enabled, it adds a new page in the Magento Admin Panel under the menu **Marketing > Communications > Yireo EmailTester**.

The menu brings you to the form page.

Yireo Email Tester

Generic Options

Mail To *

Store View *

Email Template *

Customer Value

Customer ID (No customer found)

Customer Search

Product Value

On this page, you can enter details to preview a specific Magento transactional emails or send this email to a specific inbox of your choice.
